

Features

The new Newskill Serike V2 TKL has been completely redesigned to offer a superior writing and gaming experience. With a minimalist aesthetic, straight lines and high-quality finishes, it fits the latest trends. Its aluminum construction is the support you need for your long gaming or work sessions.

IMPROVED DESIGN

In terms of design and structure, the Serike V2 TKL has been completely redesigned, adopting a more minimalist aesthetic with straight geometries and rounded corners. The reinforced aluminum construction and high-quality materials of the keys not only enhance their aesthetics, but also ensure comfort and greater durability for any use.

HOTSWAP

One of the main improvements is the new PCB with interchangeable bases that allows mechanical switches to be installed individually, offering endless customization. The base uses the standard 3-pin connector, making it compatible with new NewSwitch switches and any other switch with the same connection type. In addition, it now supports "Snap-in" stabilizers for keys such as the space bar.

NEW DETAILS

The connectivity of the Serike V2 TKL has been improved with a removable USB-C cable, which is more convenient for management and transport, and allows you to customize it with several additional cables.

SOFTWARE

The new Serike V2 TKL software allows you an infinite number of configurations. You can customize the lighting, remap the function of the keys, create shortcuts or macros for FN functions. It also allows you to create individual profiles for specific work environments or games, fully adapting to your needs.

Technical specifications

GENERAL SPECIFICATIONS

Model: Serike V2 TKL
 Format: TKL (Tenkeyless) 88 keys
 Frame: Aluminum finish
 Lighting: RGB (configurable from keyboard and software)
 Switch: Mechanical - NewSwitch Red (Linear)
